SYNTHETIC TEST - NOMINAL 2D GEOMETRY

Units: mm. Datum O=(0,0), X right, Y up. All dimensions below are nominal definitions.

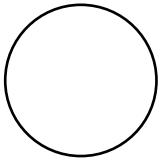
L1: straight line from (0,0) to (100,0). Length D1 = 100 mm.

C1: circle with center (25,25). Radius D2 = 10 mm. No other geometric features.

Scope: ONLY L1 and C1. Labels and datum marks are source annotations, excluded from CAD output.

Numerical export test criterion: 0.02 mm. This is NOT a manufacturing tolerance.

Physical accuracy: UNKNOWN. Synthetic software fixture; no measured physical object.



C1: center (25,25), D2 = R10 mm

L1: D1 = 100 mm

O = (0,0) **(100,0)**

Use readable nominal definitions and independent export checks. Do not assert physical or manufacturing precision.
